

Node Landing Page Verification Checklist

Version 3.0

15 September 2026

This checklist defines the minimum information an EOSC Federation Node Landing Page (NLP) must carry once the node moves into production, distinct from the node's dedicated page on the eosc.eu website.

A Node Landing Page (NLP) **is the web page corresponding to the URL** registered for the node in the EOSC EU Node [Contributors Dashboard registration application](#) (section 1.2, pag.4, form field n.6 named: “Website address”), i.e. the entry point through which EOSC users reach the node's own resources and services. Each point below is intended to be objectively verifiable — checkable by inspection or link-following, without a style judgement — and to confirm that the page serves EOSC end-user researchers rather than an internal or institutional audience. The required information may be presented on a single page or split across interlinked pages, provided each point remains independently checkable.

Required

1. The Node Landing Page must either be:

- a) Publicly accessible (anonymously, i.e. without the need for users to login)
- b) Or, alternatively, must be accessible via login through EOSC AAI

In the same way, all resources pointed by the Node Landing Page, thus exposed to EOSC users, either directly (on the Landing page itself), or through links through intermediate pages, must either be:

- a) Publicly accessible (anonymously, i.e. without the need for users to login)
- b) Or, alternatively, must be accessible via login through EOSC AAI.

“**Login in through EOSC AAI**” means the Node Landing Page or the Resource’ access web page (linked by the NLP) must present the functionality to authenticate users via EOSC AAI, displaying a login button/URL pointing to the EOSC AAI compliant access mechanism of the node, to be integrated and verified as part of the node enrolment/registration process with the EEN.

In addition, the NLP must:

- 2. Clearly state the Node’s scope, intended users and responsible organization. (It is up to the Node to feature all the organisations involved).
- 3. Clearly and visibly show the EOSC logo and the official Tripartite-approved name of the Node.
- 4. Provide a link to the Node’s own dedicated page on the eosc.eu website must be included — the Node’s entry under eosc.eu/building-the-eosc-federation, not the eosc.eu homepage or the index page itself.
- 5. For all research resources offered by the Node to EOSC users, the following information must be accessible in English either directly or via the link to the resource’s entry in the EOSC Catalogue:

- a. Purpose description;
 - b. Acceptable Use Policy (AUP);
 - c. User Access Policy (UAP).
- 6. Provide means of contacting the Node helpdesk
 - 7. Be in English (Any other pages and information are not required to be strictly in English).
